

# Functional Map for the golf industry in Europe

The Functional Map for Golf states all the main functions in the golf industry. The methodology used is to breakdown large functional areas in to smaller functions. The KEY PURPOSE is the largest function which is broken down in to KEY AREAS, which in turn are broken down on to KEY ROLES and finally the most disaggregated part of the Map are the KEY FUNCTIONS which are also the titles of the Occupational Standards - which have been developed only for those roles relating to the golf professional.
